USIU-Miramar Trunk Sewer

Background

USIU- Miramar Trunk Sewer is part of a program established by the City of San Diego and the Sewer Main Replacement Program as mandated by the Environmental Protection Agency. The pipeline, located in the Scripps Miramar Ranch Community Plan Area, was originally installed in 1969 and is at the end of its design life. This important infrastructure improvement project will bring these mains up to current City standards and will relocate a major portion of the trunk sewer to the public right of way.

Project Overview

The project consists of replacing approximately 2.2 miles (11,700 linear feet) of trunk sewer main ranging in diameter from 18 to 21 inches, and of abandoning approximately 0.4 miles (2,240 linear feet) of existing 15-inch sewer mains. The work also includes replacement of 213 linear feet of smaller tributary sewers. The only street affected by this project is Pomerado Road from Avenida Magnifica to the Interstate-15.

Elements of the USIU - Miramar Trunk Sewer project include: jack & bore tunneling under I-15 and Pomerado Road, installation of sewage bypass system(s) to maintain flow during construction, reconstruction of existing manholes, traffic control, installation of curb ramps, street resurfacing, and the replacement of landscaping and re-vegetation.

Construction Schedule

Construction for this project is estimated to begin in April 2011 and complete by May 2012.

Cost

The total estimated construction cost is \$3.9 million.

Additional Information

Additional information about this and other important infrastructure projects can be found online at www.sandiego.gov/engineering-cip, or by calling the public information line at (619) 533-4207.
